Learning Confidence

Learning Confidence is defined as the internal energy learners exhibit during the process of learning.

Learning Confidence is strong when...

- ***Learning Value*** is high;
- ***Learning Connections*** are abundant; and
- ***Learning Risk*** present is self-determined to be manageable.

Conditions Impacting Learning Confidence

Learning Confidence = (High (+) **Learning Value** / Low (-)) + (Abundant (+) **Learning Connections** / Minimal (-)) + (Manageable (+) **Learning Risk** / Stressful (-))

Essential questions to ask in order to get a sense of the three conditions that impact learning confidence.

What are the benefits?
The personal return on investment (ROI) for the energy spent by the learner as a result of their learning efforts.

What linkages are available?
The quantity and quality of the connections with other learners, sources of information and experiences for learning.

What is the exposure?
The self-determined level of comfort a learner has with being open during the learning process.
